PROJECTS

droplet | https://github.com/kyled871/droplet |https://project-droplet.herokuapp.com/
- Droplet is a simple social media platform developed by myself and 3 teammates in two weeks as a project to challenge our skill building a full stack web application.
- My role was to connect the backend with the front end using jquery, style elements with bootstrap, and write the Readme file. We were all responsible for generating ideas, creating the project from scratch, setting up a server, and connecting to a database.
- For this project we used Node.js, mySQL, Sequelize, Express, jQuery, HTML5, CSS3, bootstrap, a library called Bcrypt to encrypt users' passwords and deployed on heroku using JawsDB.

Dinner and a Movie github.com/CurtisLane/Dinner-and-a-Movie | curtislane.github.io/Dinner-and-a-Movie
- Search for recipes and top trending movies on the same page.
- Role: Manage agile project workflow with Trello, use ajax to query two api's, use jQuery to display results dynamically, implement Animate on Scroll and Lettering.js libraries, and contribute to front end styling.
- HTML5, CSS3, JavaScript, jQuery, AJAX, Api's, AOS, Lettering.js

Friend Finder | https://github.com/CurtisLane/Friend-Finder | https://friend-finder064.herokuapp.com/
- A web application which allows a user to complete a survey and find their most compatible match.
- Objective: Produce a live website with a polished UI that will take in user data, compare it to data stored on the server, and give back results.
- HTML5, CSS3, JavaScript, jQuery, Bootstrap, Express, Heroku
